

Environmental control

Internet of Things with business sense

We create your bespoke IoT solution because your requirements are unique. We put to work the full range of devices that serve your purposes (sensing, actuation, etc.), connect them via the Internet and serve them in the cloud to help make your business more efficient.

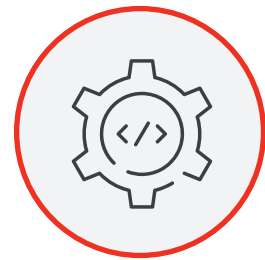

We dominate the setting

Cloud, API, Linux, sensors, web services, and many more.

We innovate

We create new IoT solutions.

We design for you

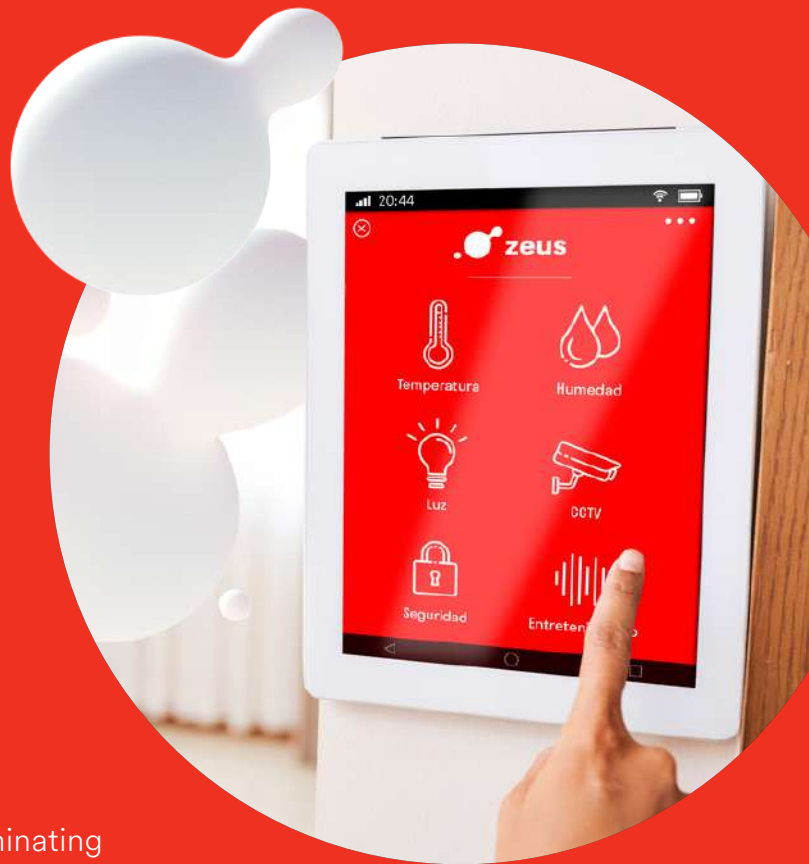

Because your requirements are always unique.

Zeus environmental control

-

We measure basic environmental parameters —temperature, humidity, power consumption, flooding, smoke, etc.— and securely deliver them to the cloud so you can make important decisions about your alarms and critical data, from anywhere and without relying on your data centre’s cooling, lighting and security providers.

ZEUS Switch - TV Hospitals

-

Monetise your hospital’s TV service by eliminating cumbersome contracts and external technologies that take away the profits.

Any IoT challenges with no apparent solution?

-

Talk to us. We specialise in connecting complicated pieces. We master sensing, actuation, networking protocols, geolocation, but we’re also experts at integrating disparate systems and we love working in the cloud.
